

FarmOnline Explorer App

Getting started

1 FarmOnline Explorer App – preparation

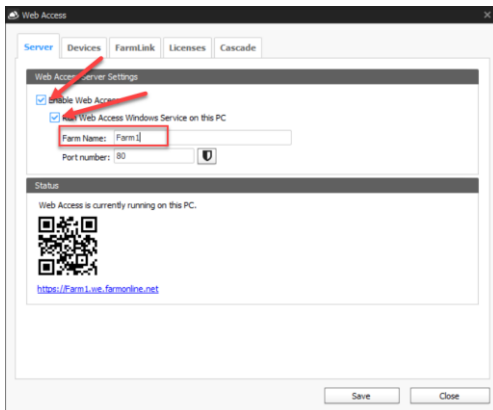

To use FarmOnline Explorer App **Web Access** must be activated in FarmOnline Explorer. It is important that **Web Access** is activated on a computer which is always switched on and fulfils the demands for the internet connection.

The function can only be activated by a user with administrator rights.

Units logging on to the system through the mobile app can be set up for either reading or reading/writing access. In the app the user has the same rights as set up in FarmOnline Explorer.

In FarmOnline Explorer **Web Access** is activated like this:

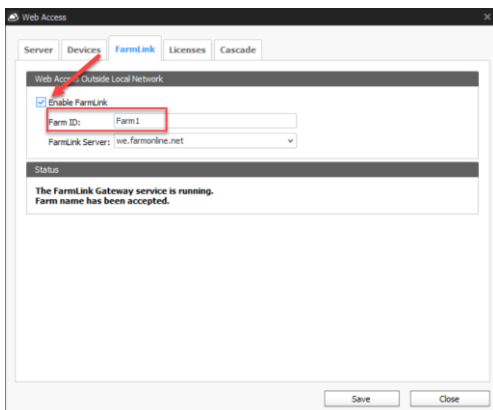

Open **Web Access** under **Tools**

Under the tab **Server**, checkmarks must be made in **Enable Web Access** and **Run Web Access Windows Service on this pc**.

Enter the name you want next to **Farm Name**:

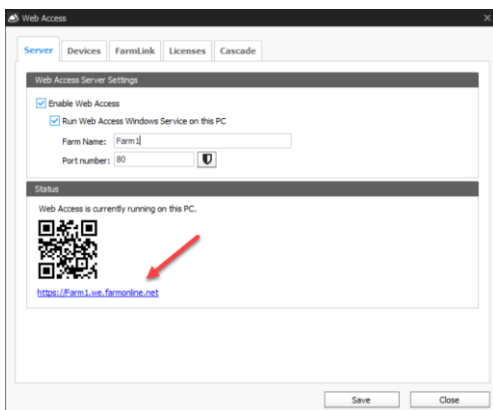

Only change the **Port number** if it conflicts with other programs.

Under the tab **FarmLink**, make a checkmark in **Enable FarmLink**.

Enter the name you need to recognize the farm next to **Farm ID**. Do not make any empty spaces in the name.

Press **Save**

Go back to the tab **Server**.

The web address shown under the QR code is now changed and contains the name entered next to **Farm ID**.

Write down the complete web address.

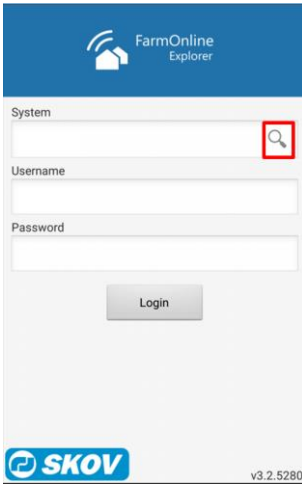

2 Installation

Download the FarmOnline Explorer App from Google Play (Android) or AppStore (iPhone).
Enter 'FarmOnline Explorer' in the search field and download the app.

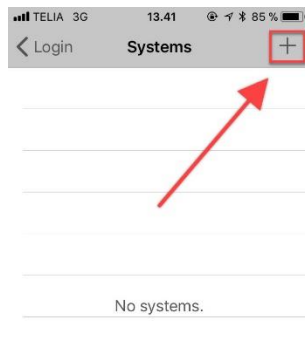

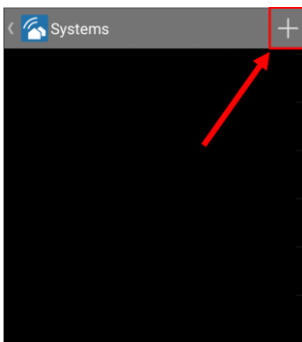

Open the app

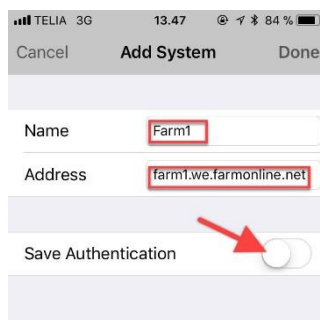

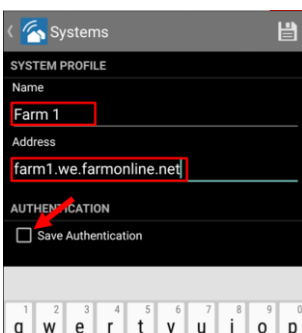

Example from Android and iPhone

Press the symbol next to **System**.

Press the Add symbol in the upper right corner to add a system.

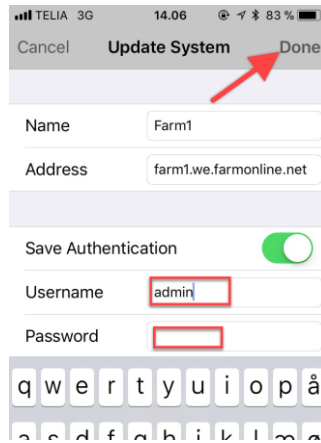

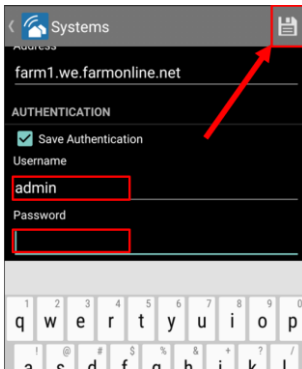

First enter the name of the farm in the field **Name**.

In the field **Address** you must enter the web address you noted down. It is important that you enter the entire address correctly.
(example: <https://Acadey1234.we.farmonline.net>)

Then enable **Save Authentication**.

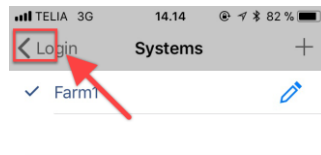

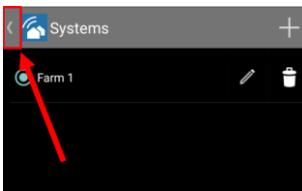

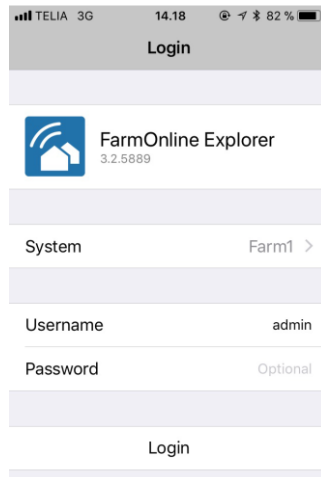

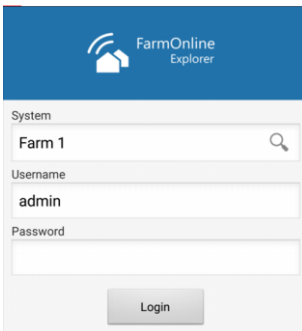

Next to **Username** enter the user name from FarmOnline Explorer.

Enter any required password for the used name from FarmOnline. Password is not mandatory.

Press in the upper right corner to save.

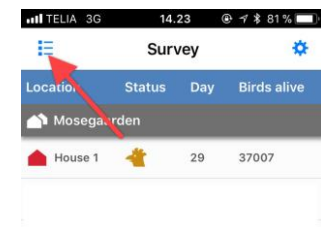

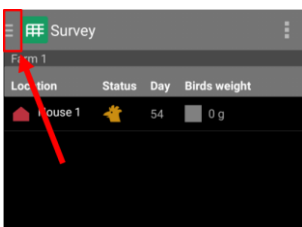

Press in the upper left corner to go back to the login screen.

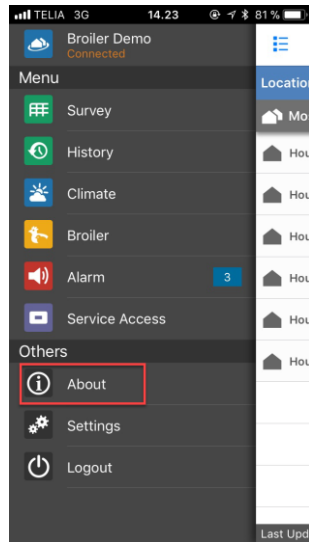

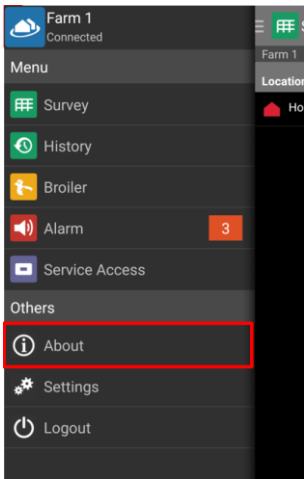

Press **Login**

You now have access to FarmOnline Explorer via the app. See also. *FarmOnline Explorer App Technical Information* for detailed description of the app in English.

You can see the name of the device on the device.

Press the upper left corner to open the FarmOnline Explorer App main menu.

Then press **About**

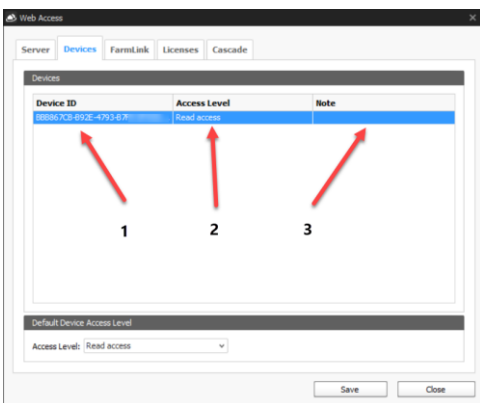

See the **Device Id**.

This ID is required to open for access in FarmOnline Explorer.

2.1 Confirm access

In FarmOnline Explorer you must determine which type of access the user should have:

Open **Web Access** under **Tools**.

Select the tab **Devices**

1. When a device (telephone or tablet) has been logged into FarmOnline Explorer, you can see the device ID in the list.
2. Highlight the device in the list and press the arrow next to the field **Access level**, to select the access level of the device.
3. You can name the device for recognition.

Press **Save** to save the settings.

3 *Fault finding*

If the app has no network.	Check that the mobile device has access to the internet. Check that the FarmOnline Explorer App is allowed to use data.
"The entered URL cannot be recognised".	Check that you have entered the URL exactly as it is stated under System in FarmOnline Explorer.
If the app does not start up with the FarmOnline Explorer survey.	Check that Web Access is activated on the computer running FarmOnline Explorer.
